

SAKHAWAT ALI

Software Engineer

msakhawatali131@gmail.com | Ph : +92 302 9180131 | LinkedIn | HackerRank | LeetCode | GitHub | Lahore

PROFESSIONAL SUMMARY

Software Engineer Software Engineer with hands-on experience building REST APIs and backend applications using Python, FastAPI, Django, and PostgreSQL. Currently working as, a Python Developer Intern at Hubble42 Inc., developing backend features and scalable API solutions. Strong understanding of authentication, database design, and software engineering principles, with a passion for backend development and problem solving.

SKILLS

Programming Languages: Python, C++, JavaScript

Libraries/Frameworks: FastAPI, Django

Tools / Platforms: VS Code, Git, GitHub, Postman

Databases: PostgreSQL, SQLite

Concepts: REST APIs, OOP, Authentication (JWT, OAuth2), Problem Solving

PROJECTS

Postgram — Social Media Web App | GitHub URLs (Django, PostgreSQL, Bootstrap 5)

- Built full-stack social media platform with photo text post sharing, likes, and privacy controls.
- Implemented secure user authentication, profile customization, and password management.
- Added search functionality to discover posts by username, tags, and description.
- Designed responsive UI using Bootstrap 5 with public/private post visibility toggle.

Social Media API (Facebook clone) | GitHub URLs (FastAPI, PostgreSQL, SQLAlchemy, JWT)

- Developed complete authentication pipeline using JWT with secure password hashing.
- Implemented posts and comments CRUD with ownership validation and visibility rules.
- Designed friend request workflow (send, accept, reject) with scalable DB models.
- Applied clean architecture principles and modular structure for maintainability.

E-Commerce API | GitHub URLs (FastAPI, Tortoise ORM, JWT)

- Implemented user registration, secure login, and JWT session handling.
- Built product listing, orders, cart, and profile management APIs.
- Added email verification and automated signals for order status changes.
- Designed relational models ensuring data consistency and performance.

Task Management System | GitHub URLs (Django, SQLite)

- Developed a full-stack Task App using Django's MVT framework for clean logic and UI separation.
- Implemented a Secure Auth system for private user registration, login, and task management.
- Leveraged Django ORM with SQLite for efficient database CRUD operations and task filtering.

EDUCATION

University of Okara

Okara, Pakistan

Information Technology Bachelor of Science

2020 – 2024

Relevant Coursework: Programming, Database Management, Web Development, Software Engineering, Computer Networks, Data Structures and Algorithms

CERTIFICATIONS

- Python (Basic) – HackerRank
- REST API (Intermediate) – HackerRank
- Problem Solving – HackerRank
